Office Action Summary

Application No.

10/812,672

Applicant(s)

COLE ET AL.

Examiner

Ernst V. Arnold

Art Unit

1616

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 6/13/06.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1 and 3-21 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1 and 3-21 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

The Examiner acknowledges Applicant's remarks filed on 6/13/2006. Applicant's arguments have been fully considered but have not been found to be persuasive for the reasons of record and those stated below. Upon further consideration, the Examiner has a new ground of rejection. This action is non-final. Applicant has cancelled claim 2 and added claim 21. Claims 1 and 3-21 are pending in the application.

Withdrawn rejections

Claims 1-6 were rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Applicant has amended the claim to recite a utility of "providing a therapeutic benefit". The Examiner withdraws the rejection.

Claims 1, 3-8 and 11 were rejected under 35 U.S.C. 102(b) as being anticipated by Leong (US 6,145,341). Applicant asserted that Leong does not disclose combinations of gemstones. The Examiner finds this persuasive and withdraws the rejection.

Claims 1, 11, 12, 13 and 15 were rejected under 35 U.S.C. 102(b) as being anticipated by DERWENT-ACC-NO: 1990-140052 abstracting CN 1033154. Applicant has amended claim 1 to delete pearl and the rejection is thus moot and is withdrawn.

Claims 1 and 13-15 were rejected under 35 U.S.C. 102(b) as being anticipated by DERWENT-ACC-NO: 2000-148175 abstracting CN 1235834. Applicant has amended claim 1 to delete pearl and the rejection is thus moot and is withdrawn.

Claims 1, 16 and 19 and 20 were rejected under 35 U.S.C. 103(a) as being unpatentable over DERWENT-ACC-NO: 1990-140052 abstracting CN 1033154. Applicant has amended claim 1 to delete pearl and the rejection is thus moot and is withdrawn.

Claims 1, 7, 9 and 10 were rejected under 35 U.S.C. 103(a) as being unpatentable over Leong (US 6,145,341). Applicant asserted that Leong does not disclose combinations of gemstones. The Examiner finds this persuasive and withdraws the rejection.

Claims 1, 16 and 17 were rejected under 35 U.S.C. 103(a) as being unpatentable over DERWENT-ACC-NO: 2000-148175 abstracting CN 1235834. Applicant has amended claim 1 to delete pearl and the rejection is thus moot and is withdrawn.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1 and 3-21 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. In the instant case, claims 1 and 21 recite the limitation "a combination providing a therapeutic benefit". The instant specification fails to provide information that would allow the skilled artisan to fully practice the instant invention without undue experimentation.

The factors to be considered in determining whether a disclosure meets the enablement requirement of 35 U.S.C. 112, first paragraph, have been described in *In re Wands*, 8 USPQ2d 1400 (Fed. Cir. 1988). Among these factors are: 1) scope or breadth of the claims; 2) nature of the invention; 3) relative level of skill possessed by one of ordinary skill in the art; 4) state of, or the amount of knowledge in, the prior art; 5) level or degree of predictability, or a lack thereof, in the art; 6) amount of guidance or direction provided by the inventor; 7) presence or absence of working examples; and 8) quantity of experimentation required to make and use the claimed invention based upon the content of the supporting disclosure. When the above factors are weighed, it is the Examiner's position that one skilled in the art could not practice the invention without undue experimentation.

1) Scope or breadth of the claims

The claims recite "a combination providing a therapeutic benefit". The specification merely discloses, without more, that a naturally occurring element combination can provide or improve the physical energy, well-being and support of individuals and provide relief from various types of pains and aches such as muscle stiffness, headache, menstrual pain, sprain, inflammation, arthritis, carpal tunnel, bruises, broken bones and sports injuries (Page 3, [0008]). However, there is no evidence that the invention works as instantly claimed.

2) Nature of the invention

The nature of the invention is directed to an elemental combination for providing a therapeutic benefit.

3) Relative level of skill possessed by one of ordinary skill in the art

The relative level of skill possessed by one of ordinary skill in the art of medical research is relatively high, as a majority of lead investigators directing scientific research and development in this particular technological area possess an M.D. and/or a Ph.D. in a scientific discipline such as organic synthetic chemistry, medicinal chemistry, biochemistry, pharmacology, biology or the like.

4) State of, or the amount of knowledge in, the prior art

The therapeutic value of crystals is controversial in the art and there are not a sufficient number of reports available identifying the uses of crystal therapy (Aetna's inteliHealth featuring Harvard Medical School's consumer Health Information, Complementary & Alternative Medicine, Crystal Therapy, Electrocrystal Therapy 07/05/2005 page 2).

5) Level or degree of predictability, or a lack thereof, in the art

The safety and effectiveness of these techniques have not been thoroughly tested scientifically. There is no evidence for this technique (Aetna's inteliHealth featuring Harvard Medical School's consumer Health Information, Complementary & Alternative Medicine, Crystal Therapy, Electrocrystal Therapy 07/05/2005 page 2).

6) Amount of guidance or direction provided by the inventor

Applicant was required to provide in the specification additional guidance and direction with respect to how use the claimed subject matter in order for the application to be enabled with respect to the full scope of the claimed invention. Applicant does not provide any guidance.

7) Presence or absence of working examples

The specification fails to provide any scientific data and working embodiments with respect to a combination providing a therapeutic benefit.

8) Quantity of experimentation required to make and use the claimed invention based upon the content of the supporting disclosure

Applicant has not disclosed any working examples nor suggested the amount of material required, in what ratios, and for what duration they must be applied/administered to the patient in order to achieve a therapeutic benefit. Furthermore, how does ingestion of the composition relate to therapeutic benefit? How much of the composition is required to provide such a benefit if ingested? How does one of ordinary skill in the art know if an individual is in need of vibrational therapy and how does one of ordinary skill in the art know which combination to place where next to the individual to provide a therapeutic benefit? As a result, one of ordinary skill in the art would be required to conduct labor intensive trial and error experimentation with each and every combination in a myriad number of ratios of components for an unknown period of time, not to mention the preferred route of administration such as oral, topical, or rectal, on patients suffering from, for example, pain in order to ascertain if the combination had the desired therapeutic effect. Thus, one of ordinary skill in the art would have to conduct an undue amount of experimentation to reasonably and accurately determine whether the combination would provide a therapeutic benefit.

In conclusion, it is readily apparent from the aforementioned disclosure, in conjunction with a corresponding lack of scientific data and working embodiments regarding the therapeutic benefit of the combination, that one of ordinary skill in the art would therefore be required to conduct an undue amount of experimentation to reasonably and accurately extrapolate whether

Art Unit: 1616

said combination would be therapeutically beneficial. Genetech, 108 F.3d at 1366 states that “a patent is not a hunting license. It is not a reward for search, but compensation for its successful conclusion” and “patent protection is granted in return for an enabling disclosure of an invention, not for vague intimations of general ideas that may or may not be workable.”

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 7-10, 16 and 18-21 remain/are rejected under 35 U.S.C. 102(b) as being unpatentable over Ridgley et al. (US 6,378,138) as evidenced by the Wikipedia definition of tourmaline.

Ridgley et al. disclose an article of clothing that incorporates various types of healing devices such as crystals for healing various bodily ailments (Abstract; column 1, lines 36-44; and claims 1-9). The healing elements include tourmaline, smoky quartz and pyrite, for example (For listing of elements see: column 2, line 18-column 4, line 15). Tourmaline is a complex borosilicate mineral with varying amounts of aluminum, iron, magnesium, sodium, lithium, potassium, and sometimes other elements, used as a gem. Red and pink tourmaline is known as rubellite thus reading on instant claim 1 and 21 (Wikipedia tourmaline page 2 under “other names for tourmalines”). The naturally occurring elements are incorporated into the waistbands of stockings, hosiery and pantyhose as well as ankle bands hence reading on instant claims 7-9

Art Unit: 1616

and 11 (Column 24, lines 1-13 and column 5, lines 15-27). The Examiner interprets the ankle band as synonymous with ankle strap. Wearing the clothing places the combination of naturally occurring elements next to the body of the user, which would necessarily place the naturally occurring element combination in close proximity to the user; therefore reading on instant claims 16 and 18. Ridgley et al. disclose that the particular healing elements incorporated into the stocking would depend on the results desired and can vary as the element chosen, the affliction to be treated or the region of the body afflicted (Column 5, lines 36-40). The kits of instant claims 19 and 20 do not distinguish themselves from the disclosure of Ridgely et al. (See: *In re Ngai*, 367 F.3d 1336, 1339, 70 USPQ2d 1862, 1864 (Fed. Cir. 2004).

Response to arguments:

Applicant asserted that Ridgely et al. do not teach any of the elements from Group 1 including rubellite. As evidenced by the Wikipedia definition of tourmaline, another name for tourmaline is rubellite, which would be readily recognized to one of ordinary skill in the art.

Claim Rejections - 35 USC § 102

Claims 1, 7, 16 and 18-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Untracht, O. Jewelry Concepts and Technology New York 1982, pages 510 and 601 as evidenced by the Wikipedia definition of tourmaline.

Untracht discloses jewelry made from silver and tourmaline and gold and tourmaline (see page 510 11-55 and page 601 13-47, for example). As evidenced by the Wikipedia definition of tourmaline, another name for tourmaline is rubellite, which would be readily recognized to one of ordinary skill in the art. It is the Examiner's position that any therapeutic benefit provided by the combination is inherent in the combination. "A chemical composition and its properties are

Art Unit: 1616

inseparable. Therefore, if the prior art teaches the identical chemical structure, the properties applicant discloses and/or claims are necessarily present. (*In re Spada*, 911 F.2d 705, 709, 15 USPQ2d 1655, 1658 (Fed. Cir. 1990)). The kits of instant claims 19 and 20 do not distinguish themselves from the disclosure of Untracht (See: *in re Ngai*, 367 F.3d 1336, 1339, 70 USPQ2d 1862, 1864 (Fed. Cir. 2004)).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1, 3-11 and 19-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Untracht, O. Jewelry Concepts and Technology New York 1982.

Applicant claims a combination providing a therapeutic benefit comprising naturally occurring elements in amounts ranging from about 1 part to about 10 parts from each of the groups and devices associated with the combination, which are a strap, clothing or furniture and kits including the combination.

Determination of the scope and content of the prior art

(MPEP 2141.01)

The reference of Untracht is discussed above and that discussion is hereby incorporated by reference.

Ascertainment of the difference between the prior art and the claims

(MPEP 2141.02)

Untracht do not expressly teach the specific amounts of the naturally occurring elements in the combination or devices associated with the combination, which are a strap, clothing or furniture and kits including the combination.

Finding of prima facie obviousness

Rational and Motivation (MPEP 2142-2143)

It would have been obvious to one of ordinary skill in the art at the time the claimed invention was made to make the naturally occurring element combinations in the amounts of from 1 to about 10 parts and the narrower range of about 1 to about 2 parts and make devices

Art Unit: 1616

associated with the combination, which are a strap, clothing or furniture and kits including the combination and produce the instant invention.

One of ordinary skill in the art would have been motivated to do this because in the art of making jewelry one of ordinary skill in the art is inclined to mix and match various naturally occurring elements to create various combinations as shown in Untracht. It is the Examiner's position that one of ordinary skill in the art can mix and match any naturally occurring elements in any ratio to produce such combinations. The adornment of straps, clothing, and furniture is a reasonable extension of the artisan to decorate items for market.

In the absence of any criticality/unexpected results, the presently claimed invention is considered *prima facie* obvious over the prior art for the reasons of record and those stated above.

A reference is good not only for what it teaches by direct anticipation but also for what one of ordinary skill in the art might reasonably infer from the teachings. (*In re Opprecht* 12 USPQ 2d 1235, 1236 (Fed Cir. 1989); *In re Bode* 193 USPQ 12 (CCPA) 1976).

In light of the forgoing discussion, the Examiner concludes that the subject matter defined by the instant claims would have been obvious within the meaning of 35 USC 103(a).

From the teachings of the references, it is apparent that one of ordinary skill in the art would have had a reasonable expectation of success in producing the claimed invention. Therefore, the invention as a whole was *prima facie* obvious to one of ordinary skill in the art at the time the invention was made, as evidenced by the references, especially in the absence of evidence to the contrary.

Claim Rejections - 35 USC § 103

Claims 1 and 11-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Phybiosis Medicinal Clay Technical Specifications 1999 in view of Ridgley et al. (US 6,378,138) as evidenced by the Wikipedia definition of tourmaline.

Applicant claims a composition capable of being applied to the body that is a coating or paint; that ingestible in the form of a beverage or a source of water for drinking or bathing which comprises the combination of claim 1 and a method of treating an individual in need of vibrational therapy wherein the combination is ingested.

Determination of the scope and content of the prior art

(MPEP 2141.01)

The Phybiosis Medicinal Clay Technical Specifications 1999 (see the Office Action filed on 10/04/05) teaches in their pelotherapy section a variety of medicinal clays. For example, yellow kaolin is disclosed to have high contents in quartz as well as some manganese (See specification sheet). The clay may be applied externally to the body in the form of poultices, masks, baths, creams or lotions. Yellow Kaolin can be ingested by means of one teaspoon in a glass of purified water. Covering the body with the medicinal clay yellow kaolin in the form of a mask, cream or lotion would place the active ingredients (for example, quartz and manganese) in close proximity to the body of the user and the user would necessarily receive the benefit of any vibrational therapy derived from the active ingredients. (See Technical specification sheet).

The reference of Ridgley et al. is discussed in detail above and that reference is hereby incorporated by reference.

Ascertainment of the difference between the prior art and the claims
(MPEP 2141.02)

The Phybiosis Medicinal Clay Technical Specifications do not expressly teach the instantly claimed combinations capable of being applied to the body that is a coating or paint; that ingestible in the form of a beverage or a source of water for drinking or bathing which comprises the combination of claim 1 and a method of treating an individual in need of vibrational therapy wherein the combination is ingested.

Finding of prima facie obviousness

Rational and Motivation (MPEP 2142-2143)

It would have been obvious to one of ordinary skill in the art at the time the claimed invention was made to include the healing crystal combinations taught by Ridgley et al. in the compositions of Phybiosis Medicinal Clay, such as beverages, baths and coatings, and produce the instant invention and to treat an individual with the composition.

It is the Examiner's position that the inclusion of other naturally occurring elements in the pelotherapy clays of the Phybiosis Medicinal Clay is obvious to one of ordinary skill in the art who would be motivated to make an enhanced healing composition with possible synergistic effects of materials. One of ordinary skill in the art would have been motivated to do this because "It is prima facie obvious to combine two compositions each of which is taught by the prior art to be useful for the same purpose, in order to form a third composition to be used for the very same purpose.... [T]he idea of combining them flows logically from their having been individually taught in the prior art." In re Kerkhoven, 626 F.2d 846, 850, 205 USPQ 1069, 1072 (CCPA

Art Unit: 1616

1980). Furthermore, it is the Examiner's position that any individual receiving such a composition in any form would intrinsically receive any vibrational therapy benefits.

In the absence of any criticality/unexpected results, the presently claimed invention is considered *prima facie* obvious over the prior art for the reasons of record and those stated above.

A reference is good not only for what it teaches by direct anticipation but also for what one of ordinary skill in the art might reasonably infer from the teachings. (*In re Opprecht* 12 USPQ 2d 1235, 1236 (Fed Cir. 1989); *In re Bode* 193 USPQ 12 (CCPA) 1976).

In light of the forgoing discussion, the Examiner concludes that the subject matter defined by the instant claims would have been obvious within the meaning of 35 USC 103(a).

From the teachings of the references, it is apparent that one of ordinary skill in the art would have had a reasonable expectation of success in producing the claimed invention. Therefore, the invention as a whole was *prima facie* obvious to one of ordinary skill in the art at the time the invention was made, as evidenced by the references, especially in the absence of evidence to the contrary.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. No claims are allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ernst V. Arnold whose telephone number is 571-272-8509. The examiner can normally be reached on M-F (6:15 am-3:45 pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Johann Richter can be reached on 571-272-0646. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
